

Concrete utility pit covers are notorious for breakages. Often located near intersections or delivery zones, they can be a real public liability risk for councils and utility providers. The metal checker plate alternatives are no better – their grip tread is easily worn down, causing major slip hazards. Terra Firma Industries offers an ideal solution to replace broken utility pit lids. Our lightweight, durable composite fibreglass manhole covers can be used for electrical, communications, traffic signals, gas or water meters.

KEY FEATURES & BENEFITS

- Meets AS:3996 B-Class and above
- Flexible designs, colours & sizes
- High structural performance
- One man maintenance
- Permanent anti-slip
- Secure and lockable
- Non-corrosive
- Electrically non-conductive
- Transparent to radio waves

Reduce your public liability concerns and maintenance costs by installing composite fibreglass utility pit lids. Contact Terra Firma on (03) 9357-1230 or email info@tfl.com.au
