

Are you looking for a new way to promote positive community messages in your streetscape? Terra Firma's innovative Picture Lids have been designed to deliver a permanent, attractive, and functional communication at the source.

Forward-thinking councils are already looking at a range of environmental messages including:

- Drains to waterways - no chemical, paint or grease dumping
- Don't litter - cigarette butts, rubbish
- Reduce household waste heading into our bays

Already, many councils across Australia have used this technology to successfully promote environmental messages, social awareness campaigns and special events. With UV-stabilized, long-lasting artwork, do you want to ensure your unique messages will be long-term features within your streetscape?

Terra Firma picture lids offer councils a great platform to advertise community messages to the public. Councils will be able to promote environmental messages, special events, city branding or any number of community campaigns.

Terra Firma's new patented lids allow any graphic to be incorporated in the structure of the lid. With UV stabilized, long lasting artwork, councils can ensure their message will continue to be promoted with Terra Firma.

Customers can either provide the artwork to us in an acceptable format or take advantage of the services of our designers at a reasonable hourly rate.
